Yvette download evaluate

How to submit an evaluation:

1. If you haven't done so already, <u>submit your PGP public key</u> to Yvette.

2. Enter your e-mail address: [   ]
   Select a description for your evaluation:
   ○ ✔ Positive
   ● ? Neutral
   ○ ✗ Negative

   Generate a header by clicking on the "Create Header" button.
3. Add your comment to the bottom of the file, and sign the evaluation with your private key (pgp -sat file). Don't modify the header line!

4. Enter the name of the file with the signed certificate in the field below.
   Click the "Submit" button.
   [   ] [Browse...]
   [Create Header] [Submit]

 2 #
 3 # yvette-submit - Ray Lee <rhlee@mit.edu>, 12 May 96.
 4 #   Handler for Yvette comment submissions.
 5 #   Query string should specify location, _region,
 6 #   (genheader OR eval), email, and desc.
 7 #   location and _region specify a code segment, as usual.
 8 #   If genheader is present, an evaluation header line is
 9 #   printed for the specified segment. If eval, email and
10 #   desc are present, the evaluation is saved.
11 #
12 # Modified Spring Term 98 by Ivan Nestlerode <nestler@mit.edu> as part of a
13 # major rewrite of Yvette.
14 #
15 # Specifically:
16 #   -Added locking code to make nextnum() parallel-safe.
17 #   -The header format has been changed significantly to a nice, readable
18 #    line-based one that includes an MD5 checksum. This format is much easier
19 #    to parse too.
20 #
21 # Modified 3/21/99 by Ivan Nestlerode to use '/' as the _region delimiter
22 # in the Filelist case. Previously, the bell character had been used.
23 # Bell is less desirable because it is binary and because it is not explicitly
24 # disallowed as a filename character.
25 #
26 # Modified 3/27/99 by Ivan Nestlerode to check for finalized segments.
27 # Finalized segments are segments for which further reviewing is disallowed.
28 # This is useful if yvette is ever used to run some sort of vote.
29 #
